

Declaration of AI Use

I used Gemini to brainstorm ideas and structure the content for my portfolio website. Specifically, the tool helped me outline which sections to include and how to arrange them to ensure the layout is clean, eye-catching, and easy for recruiters to navigate.

Additionally, I explored implementing a dark/light mode toggle. However, since that feature requires JavaScript—which I have not fully learned yet—I decided not to implement it using AI code, keeping the project genuinely my own. All final structure, content layout, and code decisions were made by me.
